

cloud licensing assessment

Do you know the licensing implications of migrating to the cloud?

the challenge

Before migrating any commercial software or enterprise applications to the cloud – this could be applicable to both private and public clouds including co-location services – it is vitally important to fully assess the impact this could have and understand the technical and commercial consequences of the moving the asset to the cloud.

Should the software be moved to the cloud? Are there any optimisation opportunities that could be taken advantage of? Importantly, are their additional licensing or cost implications of the proposed migration that need to be factored in at the planning phase.

the service

This service is ideal for organisations that are considering migrating software from on-premises to cloud environments. We can advise on what assets should and shouldn't be migrated into a cloud environment, we can also model different migration scenarios and their impact on cost and risk impact for migrating your current software licensing estate, we consider run costs, licensing costs, complex cloud technologies to give the optimal cost and sustainability position.

service benefits

- Software and cloud optimisation
- Act on opportunities and risks
- Roadmap & budget defined
- Compliant operations post migration
- Enhance decision making

key service deliverables

Detailed modelling of software licensing, cloud usage and optimisation options

Architecture and project reviews to help deliver modelling and tracking

Review of options for infrastructure, labour, networking and storage costs

Considers modernisation and sustainability opportunities across your software

Model licensing for key software vendors, including Oracle, SAP, Microsoft, IBM and more

Reviews and modelling for hyperscalers, AWS, Google/ GCP and Microsoft Azure
