

# future license position (flp)

## Do you understand the licensing implications for major IT change?

### the challenge

In recent years CIOs have faced an unprecedented level of change, driven by external factors that have fundamentally changed the working environments of employees and the service expectations of customers. This rapid transformation has often been unplanned, creating technical debt, additional costs and complexity that now needs to be dealt with.

Organisations are now looking to modernise their IT, retiring old legacy software and applications, reducing costs and offering new services to their businesses and clients. However, major change must be modelled to understand the contractual and licensing implications, achieving desired outcomes and minimising risk.

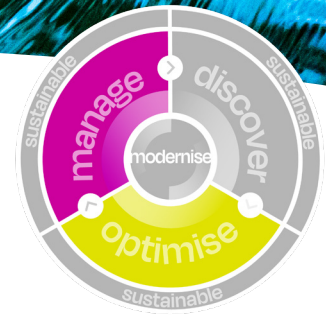

### the service

Our team of experts will analyse your current contracts, entitlements, inventory and usage to identify any compliance risk to be mitigated. Any optimisation opportunities for a defined vendor or vendors (normally via an OLP) will be provided. We can then use this baseline to model the implications of any major business change, project or modernisation programme on that vendor(s) licensing.

We can also model different scenarios, by taking a set of updated perspectives (High Level Design) from your organisation's enterprise and/or infrastructure architecture, combining it with input from your Procurement and ITAM/SAM teams. Using this data and input, one or more scenarios can be applied to show the licensing cost/risk implications to a set of potential decisions.

### service benefits

- Save & avoid significant cost
- Avoid compliance & financial risk
- Data driven decision making
- Models the impact of strategy
- Aligns IT, Procurement, Finance & leadership

## key service deliverables

**Audit of current contracts and entitlement for defined vendor(s)**

**Analysis and modelling of future software inventory and usage**

**Potential risks and cost implications of different scenarios identified**

**Scenario based planning and reporting to support decision making**

**Ongoing engagement with product or service owners for greater support**

**Executive presentation details key findings and supported by report**

### related services

- 1 Optimised License Position (OLA)
- 2 FinOps Advisory
- 3 Dynamic SAM

## why work with synyega

Our team of ITAM experts have many years of experience and certified in both ITAM and FinOps, we help to promote best practice and are active members of the FinOps Foundation and ITAM Forum. We empower clients to discover, optimise & manage their software & cloud investments through our multi award-winning services, we have helped our clients to save or avoid over £1bn in costs to date.
