

GreenOps training

GreenOps knowledge is essential for sustainable cloud management

the challenge

As cloud adoption continues to accelerate, organisations face mounting pressure to optimise costs, reduce environmental impact, maintain operational efficiency, and adopt the latest in new technologies.

However, many businesses struggle with a lack of GreenOps knowledge, leading to increasing carbon footprints, rising energy consumption and the risk of regulatory sanctions.

Co-ordinating GreenOps initiatives across an organisation can be difficult. IT, finance, and sustainability teams often operate in silos, lacking a unified strategy to balance performance, cost efficiency, and environmental responsibility. Furthermore, executives and decision-makers frequently lack visibility into how cloud and SaaS usage affects their company's sustainability goals.

With increasing scrutiny on corporate ESG (Environmental, Social, and Governance) commitments, organisations that fail to adopt GreenOps principles may find themselves at a competitive disadvantage. The challenge is clear: businesses need a framework to integrate sustainability into their cloud strategies without compromising performance and business value.

the solution

Cloud GreenOps training for a sustainable IT strategy

Our Cloud GreenOps training course equips organisations with the knowledge and tools to embed sustainability into their cloud, SaaS, and IT asset management strategies. This comprehensive program covers the Cloud GreenOps framework, principles, and actionable insights needed to drive meaningful change.

Participants will gain a deep understanding of:

The business benefits of GreenOps: Learn how adopting GreenOps can drive cost savings, improve compliance, and enhance corporate sustainability goals.

Key stakeholders & engagement strategies: Discover how to involve IT, finance, sustainability teams, and executives in a collaborative GreenOps initiative.

Deep dive into cloud, SaaS, and hardware challenges: Address specific sustainability challenges in different IT environments and develop strategies to overcome them.

The GreenOps framework in action: Explore structured approaches, critical data points, and essential capabilities for implementing a sustainable IT strategy.

Getting started with GreenOps: Walk away with a clear roadmap for integrating GreenOps principles into your organisation's cloud governance and IT operations.

By attending this course, your team will be empowered to reduce carbon output, improve business value, and support broader sustainability initiatives while maintaining the flexibility and scalability of cloud services.

Take the first step toward sustainable cloud operations- enroll in our Cloud GreenOps training today and transform the way your organisation approaches IT sustainability.

always up to date, always relevant

The world of GreenOps is still evolving, so is our training. We continuously update our content to reflect the latest industry and technology changes - helping you prepare for any scenario.

Ensure your business is up to date and optimised - let's talk about the right training for your team.

deliverables

- **Expert-led training** – Learn from seasoned professionals with GreenOps focus and experience.
- **Flexible delivery options** – Join our **interactive virtual sessions** or **in-person workshops** for an immersive experience.
- **Tailored private training** – Need something specific? We customise courses to fit your organisation's unique needs.
- **Integrated learning** – Enhance your training with optional ITAM and FinOps, and modules for an integrated approach.

Equip you and your team with the latest in GreenOps knowledge. Book a session today!
